

As a part of the first 24 fiber MTP[®] system in the industry, the CABLEExpress[®] Skinny-Trunk[®] Harness allows customers to maintain a more condensed solution as it reduces the amount of "plug-ins" required for install. Standard on all Skinny-Trunk 24 Harnesses and Assemblies, the 24 fiber MTP connector has a maximum insertion loss of .35dB, creating a clear migration path to 100G Ethernet without sacrificing performance. Plus, it comes with a lifetime warranty.

Features

- Comes standard with 24 fiber MTP connectors with an industry-first .35dB insertion loss for optimum performance in the data center
- Creates a clear migration path to 40/100G speeds while still meeting the strict loss budgets of the IEEE 802.3ba standard, future-proofing your cabling infrastructure
- 24-fiber Skinny-Trunk reduces cable bulk by over 60% to save space and reduce congestion
- Pre-engineered and customizable staggering provides neat and clean installation into your switches for optimum cable management
- Fully compatible with the Skinny-Trunk 24 cable assembly, modules and H-Series enclosures
